WORK EXPERIENCE

June – August 2025

On-the-Job Training
NIA, Tagbilaran City, Bohol
0662 J. A. Clarin St., Tagbilaran City, Bohol

PROJECT EXPERIENCE

Ina-Ani – E-Commerce Web Application

- Developed a full-stack e-commerce platform that provides web-based access for customers, sellers, and administrators.
- Built features including product management, user verification, transaction processing, and admin dashboard functionality.
- Implemented responsive user interfaces to provide a better experience across different devices.
- Integrated chatbot support to assist users and improve customer interaction.
- Designed and managed database structures for storing product, user, and transaction information.

BARMM Human Rights Survey Software Development

- Contributed as a junior developer in developing a human rights survey software application.
- Assisted in frontend and backend development to improve data collection, user experience, and system functionality.
- Helped implement features for managing survey information and monitoring human rights conditions in the BARMM region.

iCare – Offline Application

- Developed an offline application designed to provide personalized support services for healthcare, elderly care, and client assistance.
- Created user-focused features to ensure accessibility, simplicity, and efficient service management.
- Applied software development practices to deliver a reliable offline solution.

Voting System

- Developed a desktop-based voting system as part of a senior high school thesis project.
- Implemented features including voter registration, candidate management, vote casting, and automated vote tallying.
- Designed and managed the database structure for storing voter and election-related records.
- Improved the efficiency and accuracy of the election process through system automation.

Badlit: Bisaya/Baybayin Character Translation Using CNN

- Developed a machine learning research project focused on translating Baybayin characters into Latin words.
- Applied Convolutional Neural Networks (CNN) for character recognition and translation.
- Integrated the research into a mobile application concept for character interpretation.

IsdApp – Fish Identification and Shop Locator Application

- Developed a mobile application that identifies fish species through image recognition technology.
- Implemented features that allow users to find nearby fish shops, view shop locations, and contact sellers directly.
- Designed a user-friendly interface to help users easily identify fish and access related shop information.
- Integrated location-based services to provide convenient navigation and communication between users and fish vendors.
- Conducted system testing and improvements to ensure functionality and usability.
